

AMAZON VENDOR CENTRAL INTEGRATION PACKAGE

The diagram consists of three overlapping circles arranged horizontally, enclosed within a larger rounded rectangle. The left circle contains the Sage 200 logo, the middle circle contains the MAGMA logo, and the right circle contains the Amazon Vendor Central logo. A white arrow at the top points from right to left, and another white arrow at the bottom points from left to right, indicating a bidirectional flow of data between the systems.

AMAZON VENDOR CENTRAL INTEGRATION PACKAGE

What's included in the standard package:

Sales Orders

Sales Orders

New orders placed on VC platform will be created within Sage 200. Our implementation team will work with you to agree mapping rules around customer, distribution centres (DC), and product coding, plus required delivery date, couriers, and price. In addition to DC orders Amazon operate Dropshipping with some suppliers via VC. We can support this if Amazon Labels are in use as Amazon do not provide customer details on the orders due to data protection. If you operate both DC and Dropship, please refer to our pricing matrix. Sales Orders are a key integration that saves time and reduces errors, ensuring that subsequent messages are built on a solid foundation.

Sales Order Confirmation

Sales Order Confirmation

When processing VC orders manually, every line must be updated with a status, and potential changes. This time-consuming process can be fully automated, and our package contains flexibility to suit most models of operation with VC. We can, and often do, send two confirmations. The first is sent on order receipt, and the second is based on the order hitting a trigger point in Sage 200. The second is required when changes are made. Changes could be based on obsolete products, pricing, dates, and quantities. Products should not be added or superseded without discussion. This key integration can be the biggest time and money saver, over and above the creation of the orders.

Invoices

Invoices

Magma will extract the invoices from Sage 200 and deliver them to Amazons system, obtaining a digital receipt. So long as the invoicing address is character perfect in Sage 200, and the invoices reflect what was delivered, this process ensures rapid and accurate payment.

Excluded from Package:

ASN's

Advanced Shipment Notice (ASN). This requires integration with the system packing and labelling the goods, assuming these are not manually managed in VC. We can provide detailed requirements on request.

Package includes one country and Drop shipping partner, more available on request
